Contracts

Implementing Services

Implementing Services With WCF

- Create a WCF Service Library project
- Define Service Contract
- Define Data Contracts for operation parameters and return types
- Define the Service implementation class

Summary

- Service Contracts are .NET interfaces attributed with [ServiceContract] and [OperationContract]
- Parameters and return types from service operations are DataContracts
- Data Contracts can be explicit, implicit, or primitives
- Service implementation class can use [ServiceBehavior] to drive aspects of its behavior when called as a service
- Service instancing / lifetime is an important consideration
 - Favor PerCall
